

# SWAG LABS

## Side bar

### Prerequisites:

- Stable internet connection.
  - User has successfully opened the website URL.
  - User has to login to website.
- 

### +Acceptance Criteria:

- AS a user who successfully logged in, the icon of the sidebar should be visible.
  - given the sidebar is open
    - When user click on "all items"
    - Then should be redirected to the "All Items" page
    - And I should see the full list of items displayed.
  - View app information
    - given the sidebar is open
    - When user click on "About"
    - user should navigate to the "About"
    - user should see details about the app
  - log out
    - given the sidebar is open
    - When user click on "logout"
    - user should log out of the website and should redirected to the login screen
    - user should no longer have access to secured pages unless I log in again.
    - After a user logs in, their personal information should only be visible to them, not to other users
  - Reset application state
    - given the sidebar is open
    - When user click on "Reset app state"
    - Then the app should clear all temporary session data, And the app should return to its initial default state
    - user should no longer have access to secured pages unless I log in again.
  - Close sidebar
    - given the sidebar is open
    - When user click on "x"
    - Then sidebar should be closed
    - user should be able to continue interacting with the main screen.
    - When user click on screen outside sidebar side bar should be closed
-

### + Expected Results:

- when user click on "all items" the app navigates to home page and displays the full list of items
  - user can go to about page and know more information by click "about"
  - when user click on log out is logged out successfully, redirected to the login screen, and restricted from accessing secured pages without logging in
    - The reset app state clears session resets to default state
  - sidebar can be closed when click on "x" button or when click on blank screen
- 

### + Dependencies:

Working navigation system user login, logout systems are working, app state management is ready, data is available for "All items" and "About"
